Acoustic Content Hub Sample App

How to start

1. Make sure you have access to repo `<path-to-repo>`

2. `git clone <link to repo>`.

3. Checkout **master** branch to get the latest features.

4. Import project to **Android Studio**

5. Open `/com/acoustic/contenthub/sample/Constants.java` file and update next fields with your Watson Content Hub information.

   - `CONTENT_HUB_ID` - with your `tenantId`;
   - `BASE_URL` - with your domain name.

6. Build and run the app.

7. WCHtools (with instructions) required for pushing data model to the Content Hub can be found here: wchtool docs.
